

PROJECT EXPERIENCE

Florida Institute of Technology

As part of the Florida Institute of Technology's Central Campus program, University Housing Services developed Harris Village, a 137,000 square foot residential complex, commons building and associated structured parking deck that houses nearly 400 students. Harris Village was completed in the Summer of 2008.

UHS has developed other campus facilities for Florida Tech, including Columbia Village, seven three-story residence buildings and commons building, and Phase I of the Central Campus Redevelopment Project, which includes a 500-seat food service/banquet hall, life sciences building and aquaculture lab, 350-space parking deck and 50-meter competition swimming and diving facility.

Project Name and Location:

Harris Village
Florida Institute of Technology
Melbourne, Florida

Project Specifics:

Beds - 382
Project Completion - Summer 2008
