

The six-acre, four-story, garden-style complex consists of three residential buildings, a large multipurpose room and outdoor amphitheater for upperclassmen. It features ample parking and green space as well as a promenade connecting to Kennesaw State University Road. Constructed near a heavily wooded area, this new phase of on-campus housing expands the concept of specialty themed residence halls, providing students with living accommodations based on common interests. Each apartment comprises four-bedroom and four-bathroom units with a shared kitchen and living room. Some of the additional features include wi-fi connectivity and elevators. University Place II opened the Summer of 2012.

Project Name and Location:

University Place II
Kennesaw, Georgia
